Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (Figure 5) in view of Trout et al. (US 6,485,321).

Applicant's APA substantially disclose the claimed invention except for an operation portion extending from the operation arm of the load lever and is providing a distance from a circuit board that is greater than a distance from the operation arm to the circuit board.

Trout et al. teach an operation portion (30) extending from a operation arm and providing a distance from a circuit board that is greater than a distance from the operation arm to the circuit board (see Figure 2).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide an operation portion extending from the operation arm of the Applicant's APA load lever, as taught by Trout et al. for ease of grapping the load lever.

In the modified handle of Applicant's APA, Trout et al. do not disclose a U-shaped operation portion.

It would have been obvious matter of design choice to change Trout's operation portion to a U-shaped operation portion, since such a modification would have involved a mere change

in the shape of a component. A change in shape is generally recognized as being within the level of ordinary skill in the art.
